Please reject the NAB's petition 04-160 and let consumers continue to receive what they choose to pay for. I enjoy the convenience of commercial free music and news. I also appreciate the fact that I do not have to listen to a series of commercials before I hear traffic and weather reports.

I believe in competition. Long ago I listened to AM because of content, then I switched to FM for sound quality. Today, I mostly listen to commercial-free satellite radio for both content and sound quality. I still listen to some AM and FM stations because they are unique and offer good programs, but the majority of the radio stations all sound the same with an annoying number of commercials and DJs. There are some satellite programs that are bad. But that's just it: I should be able to choose the best programming for me. May the best radio station(s) win.
